

THE EVIDEX ENGINE: DEFEATING THE COMPLIANCE GAP

Automated, Deterministic Evidence Packs
for High-Stakes Audit Deadlines.

STATUS: DEPLOYED | TARGET: ZERO_GAP | INTEGRITY: CONFIRMED

The Finish Line is the Primary Point of Failure

The Crisis

In structurally underserved SME and NGO segments, project completion is only half the battle.

The other half is satisfying rigorous, manual verification requirements from donors and auditors amidst seasonal urgency, high consultancy costs, and disorganized digital trails.

The Compliance Gap Matrix

Solution	Cost & Speed	Structure	The Gap
Generic Storage (SharePoint, Drive)	Cost: Low Speed: N/A	None	Still requires 100% manual auditor mapping.
Enterprise GRC (Vanta, Drata)	Cost: High (Permanent) Speed: Months	Continuous	Mis-sized for a one-off grant closeout.
Manual Consulting (Big-4 / Boutique)	Cost: >\$5k Speed: Weeks	Variable	Entirely labor-dependent; not easily scaled.
LLM Chat Bots (ChatGPT)	Cost: Low Speed: Fast	Text-only	No file-ingestion pipeline or deterministic verification.

The Void: A time-bound, fixed-scope deliverable engineered specifically for the 48-hour compliance sprint.

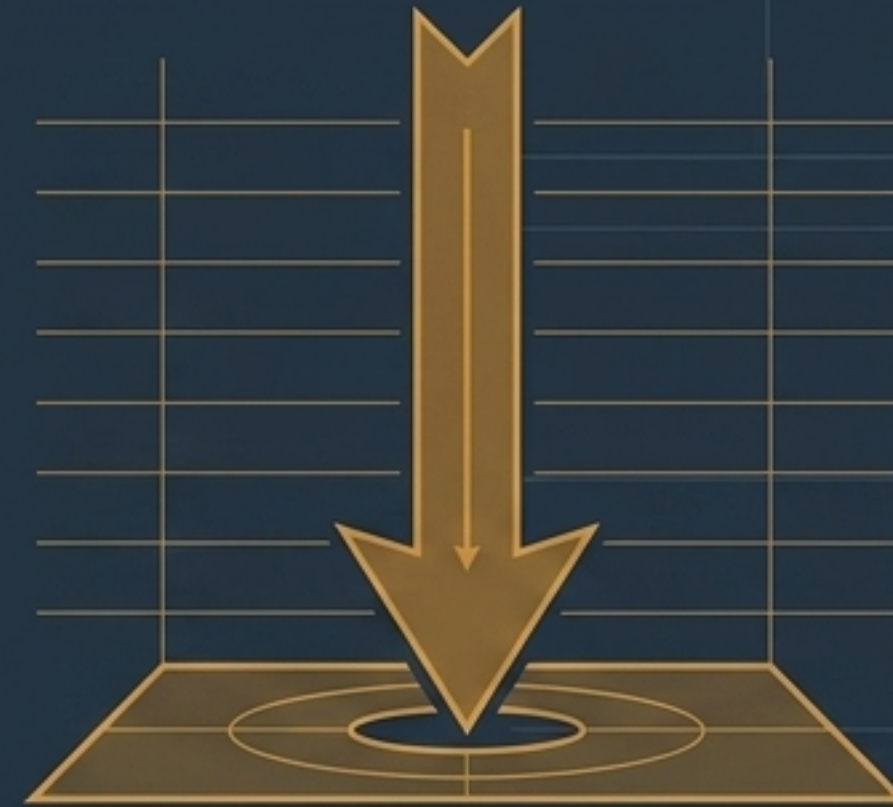

The Paradigm Shift: Vertical and Time-Bound

Horizontal (Ongoing)

Ongoing GRC platforms try to be everything. They assume permanent licenses, massive control sets, and months of onboarding. They manage posture.

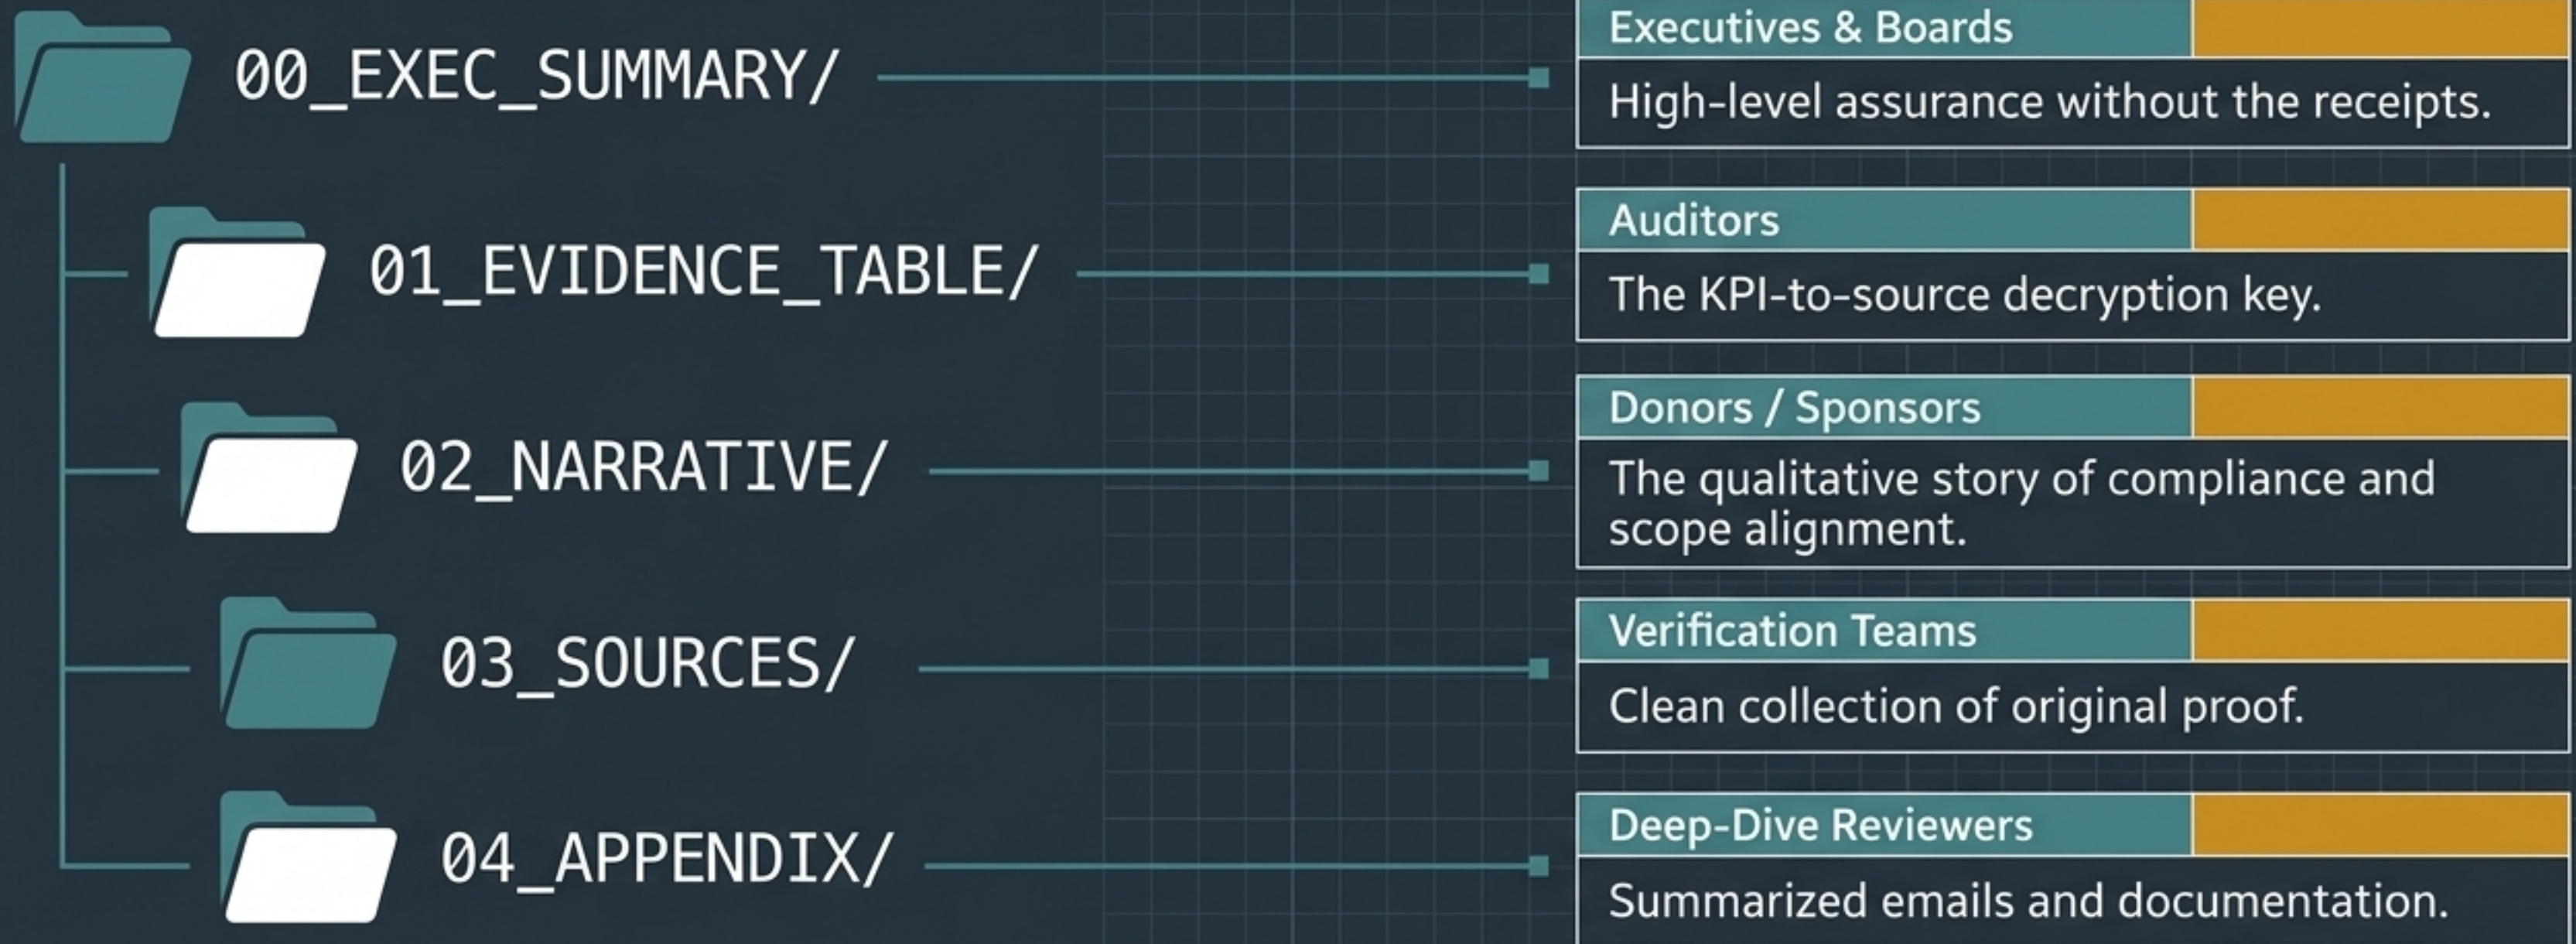

Vertical (Time-Bound)

Evidex targets a specific deliverable—an evidence ZIP—in a specific timeframe: 48 Hours. It manages proof.

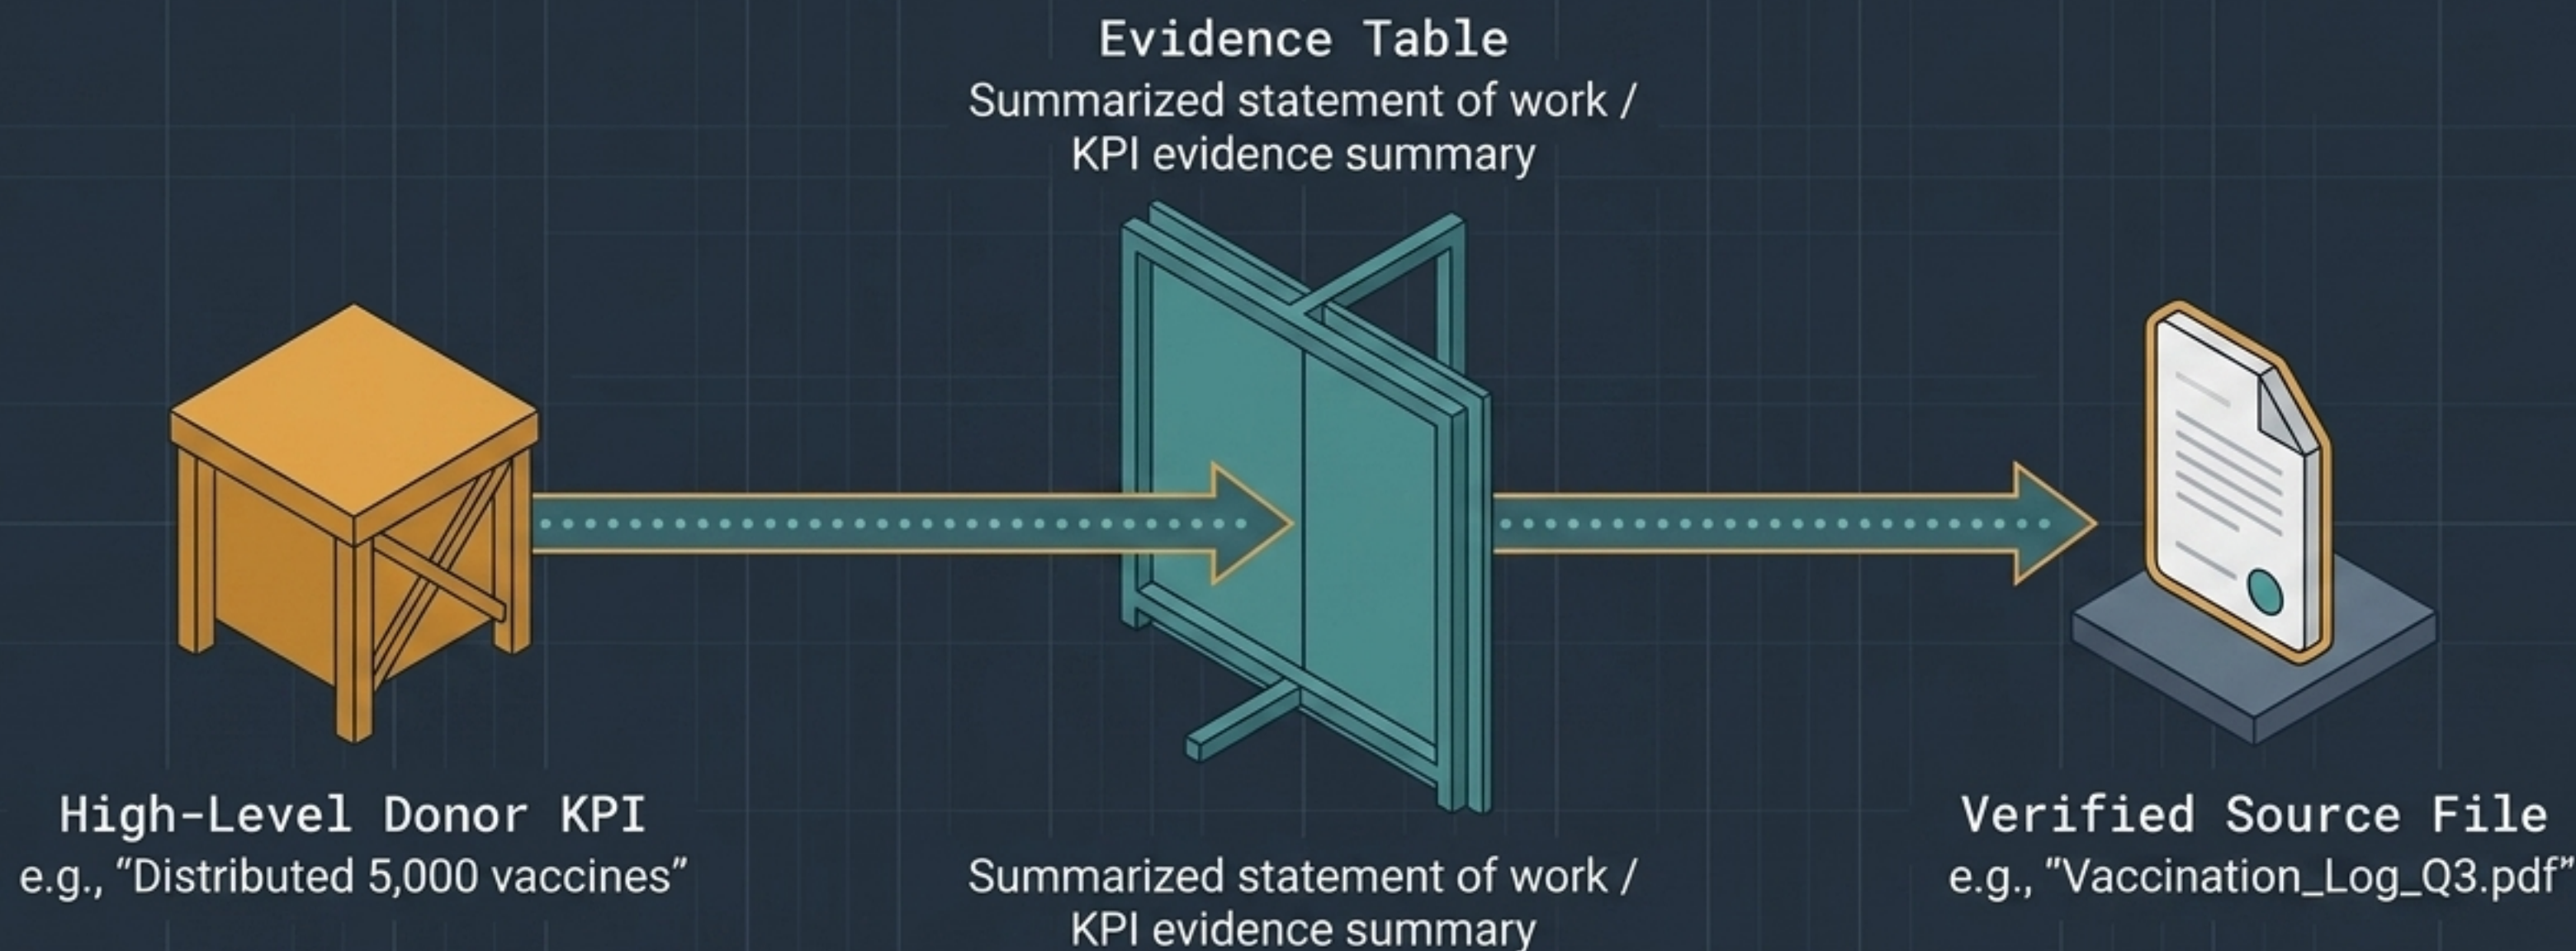

This fixed, vertical scope is what makes the Evidence Pack **highly automatable**, **highly resellable**, and **perfectly sized for a sub-\$1k price point**.

The Master Blueprint: A Standardized Control Hierarchy

It is not a data dump; it is a rigid, pre-mapped control environment designed to defeat the “black box” objection.

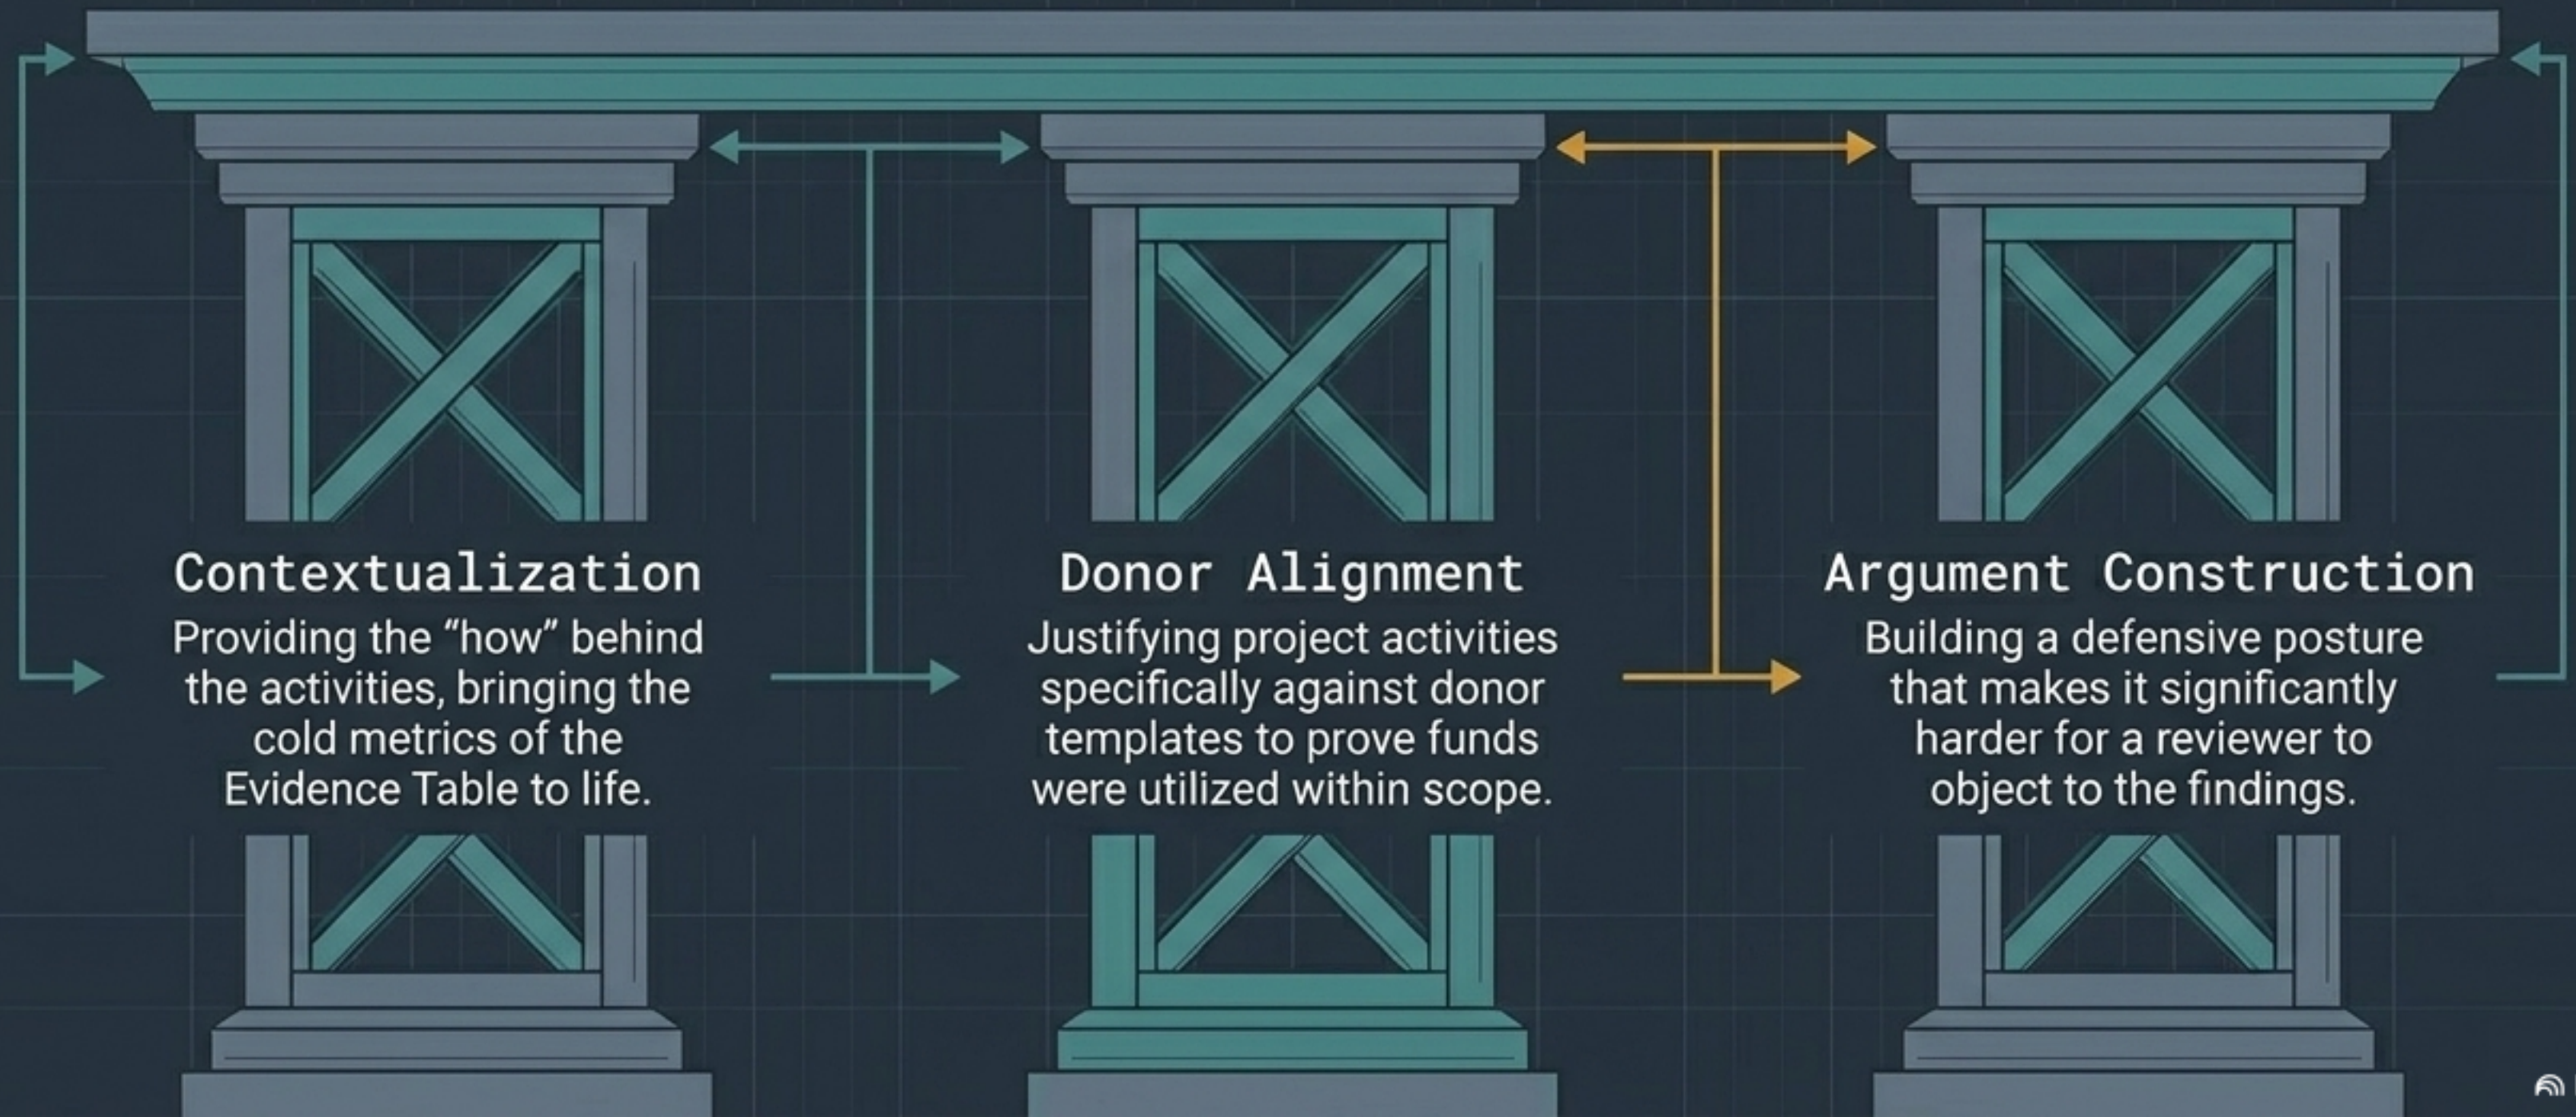

The Decryption Key: Tracing KPIs to Source Truth

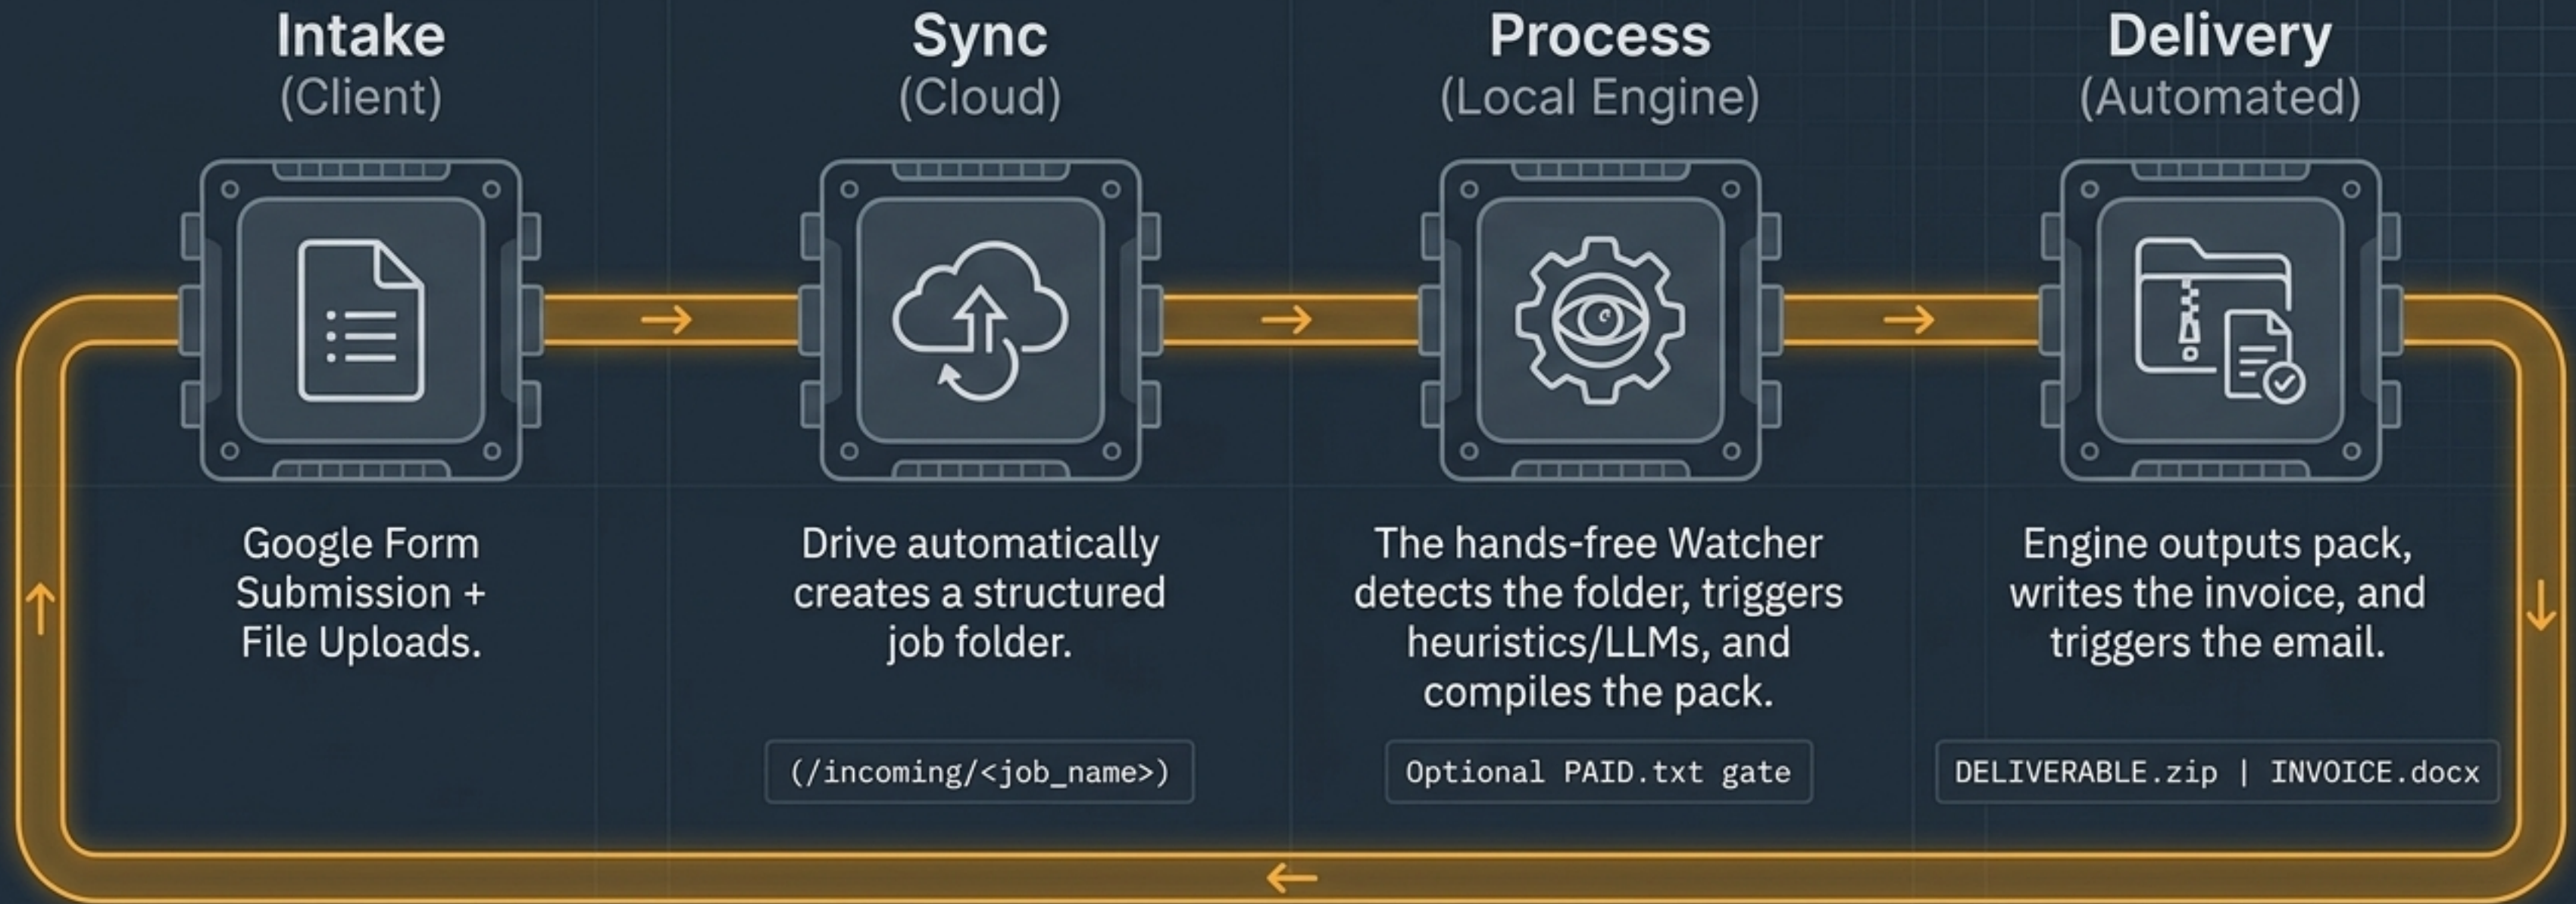

The Evidence Table is the connective tissue of the submission. By replacing raw data dumps with summarized statements of work, it pre-emptively answers the auditor's questions. It completely removes the manual mapping burden.

The Qualitative Bridge: Narrative Justification

Data and receipts alone cannot satisfy a sponsor. They require a qualitative bridge between project activities and the grant's mission.

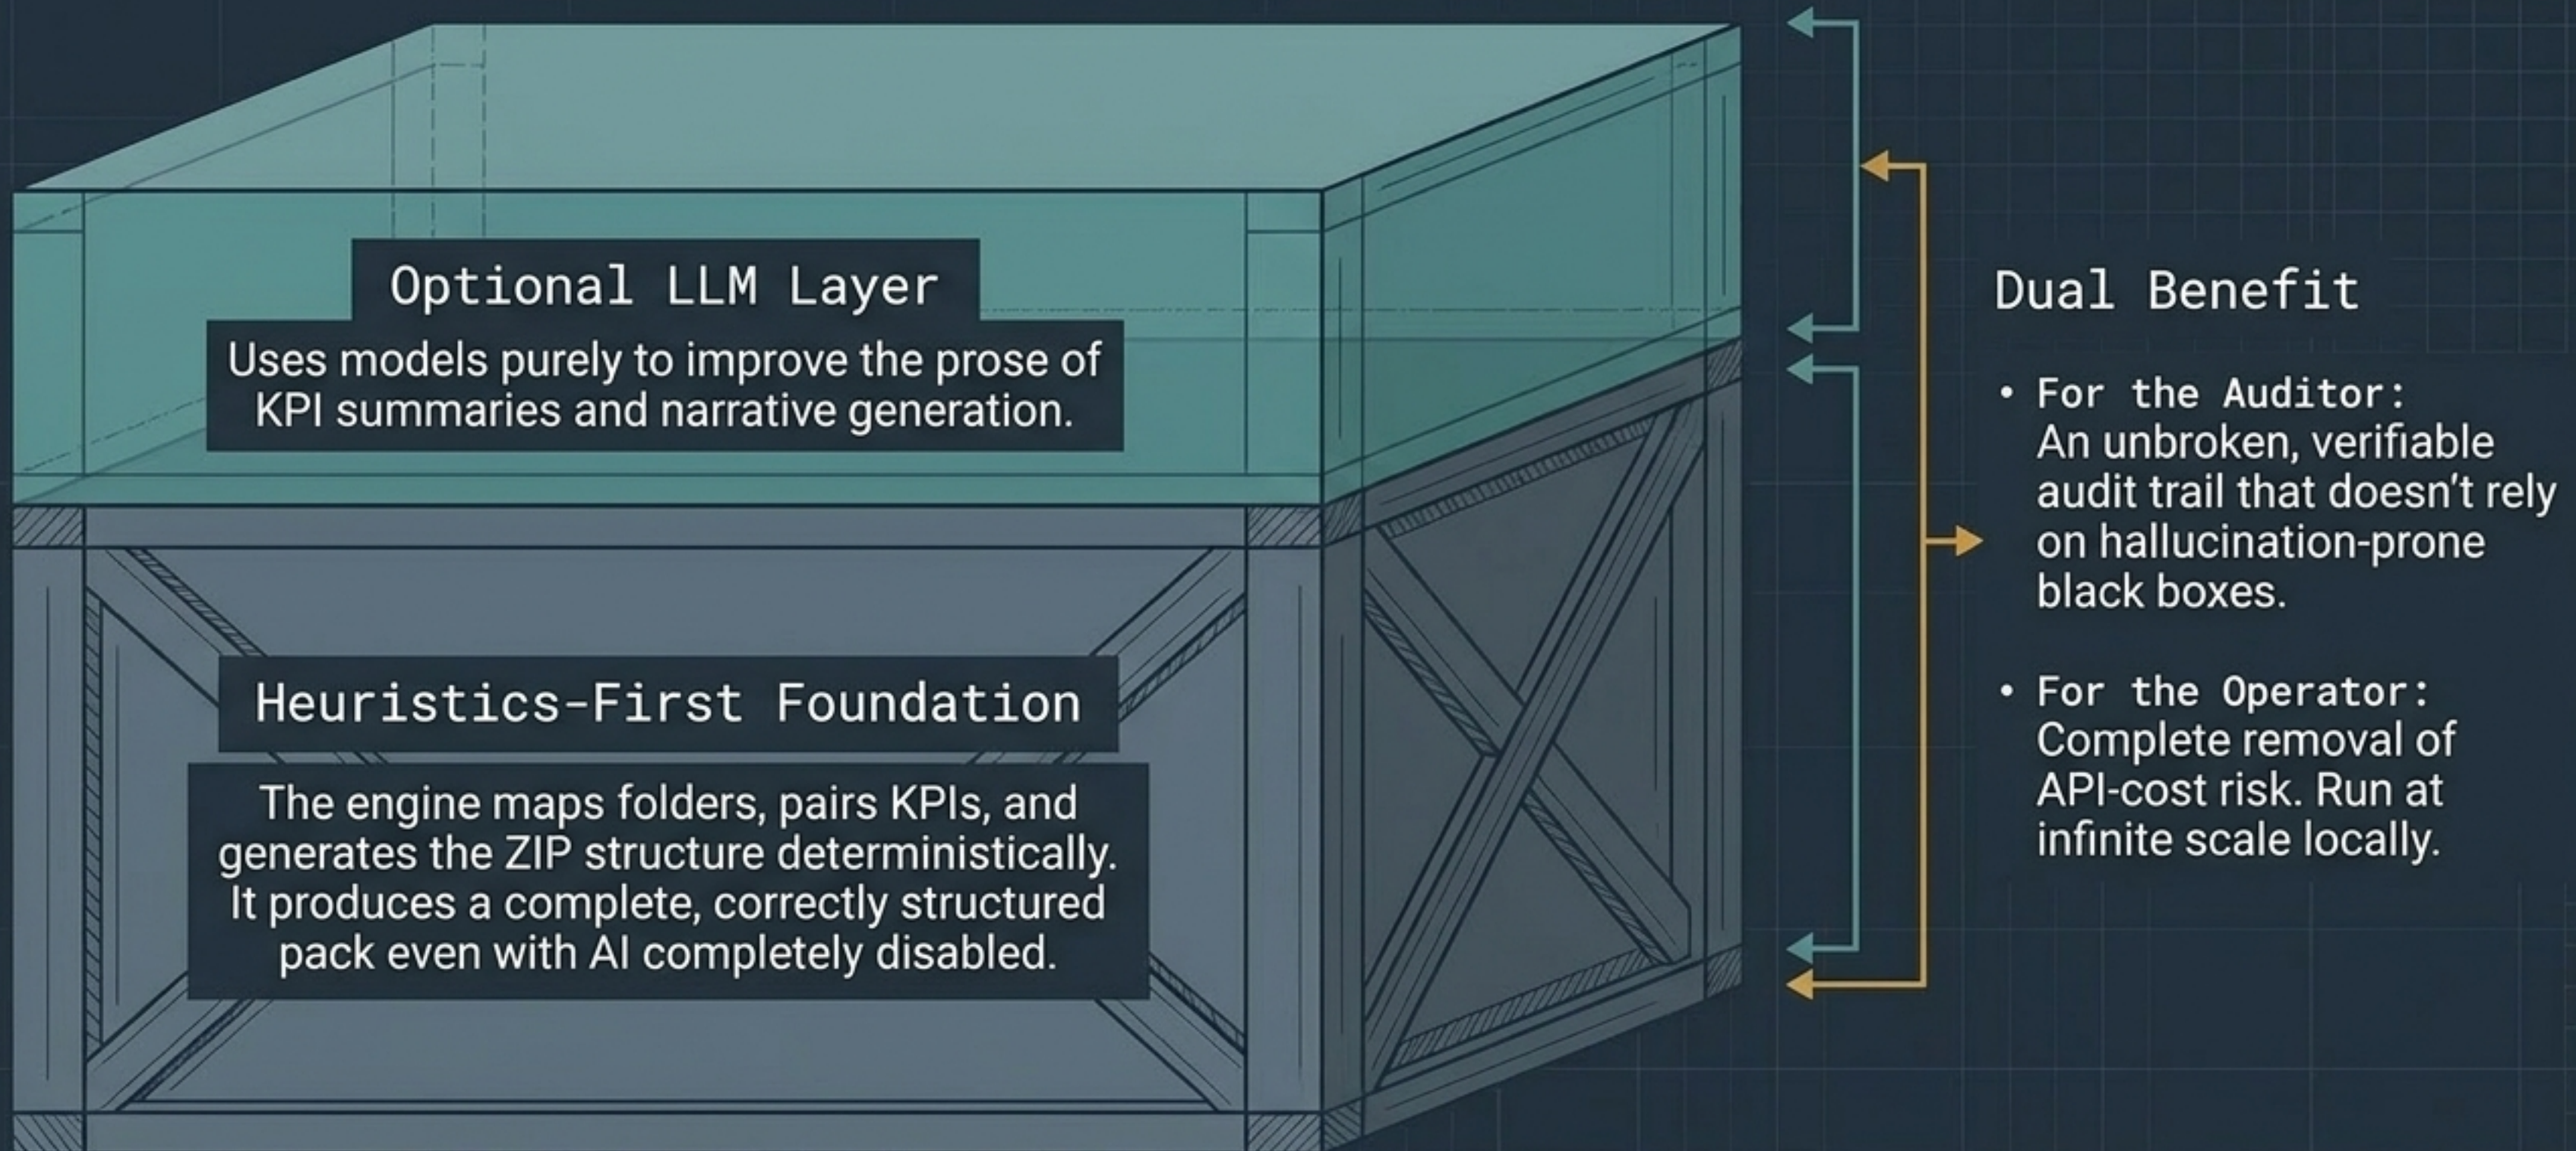

The “Quiet Engine” Automation Pipeline

Core Insight: A single operator can process dozens of concurrent 48-hour delivery jobs without proportional labor cost. Every job is an async file-drop, not a bespoke consulting engagement.

Deterministic Control: Defeating the 'Black Box'

Scalable Margins & Zero-CAC Reseller Economics

Evidex is built with a reseller-native pricing model. Consultancies and M&E specialists act as a **zero-CAC** distribution channel, capable of bringing 10-50 repeat clients in batches.

NGO / Grant

\$500

Unit Price

Priced for routine donor reporting.

Consultancy / Reseller

\$400

Unit Price

Designed for batch orders via `intake.yaml` overrides.

Corporate

\$900

Unit Price

Priced for enterprise audit readiness.

Takeaway: Unlike SaaS, you charge per-job. By automating the labor, the margin scales infinitely.

Deployment Across Seasonal Urgency Windows

Grant Closeouts

A definitive sponsor-ready bundle specifically for universities and NGOs finalizing funding.

Audit Season

Evidence tables and source folders mapped directly to expected auditor sampling.

Tax/VAT Deadlines

Rapid reconciliation of financial claims directly to source documents.

Year-End Reporting

Executive summaries and traceable appendices deployed for December Board Packs.

The Architectural Pillars of the Evidence Pack

Structure (The Folders)

Replacing disorganized cloud storage with a rigid, verifiable folder hierarchy mapped to stakeholder needs.

Speed (The Pipeline)

Enabled by the Watcher automation, replacing weeks of labor with a 48-hour, hands-free delivery window.

Traceability (The Table)

Providing a deterministic, decryption-key path from a high-level donor KPI directly to a physical source file.

High-Integrity Verification

By framing the submission as a structured control environment rather than a collection of files, organizations permanently close the compliance gap.
